Report the results of your analysis here. Answer the essay questions on the back.

**Results:** Present the results of your analysis as you would in a report.

**Calculations:** Present examples of all calculations formatted as you would for a report.

**Discussion:** How do your values for your rat’s hemoglobin and pH compare to Dr. Honeydew’s? Are they significantly different? Does your data show that the drug trial is successful? Why or why not? Discuss your confidence in your results. Should the researchers go forward with your data or do you recommend repeating the trial?
